Dock Plus Wear Pleated Dock Seals

Wear Pleated Dock Seals are used where dock shelters are not required. HAG offers "Dock Plus Wear Pleated Seals" that will protect against air leakage and provide thermal protection. Seal systems can be best used when space is restricted outside of the dock.

Product Overview

Product description

Dock Plus Wear Pleated Seals are heavy duty foam pads that compress when the vehicle docks into the loading bay. The "wear pleated dock seal" protects against insects and provides thermal protection. The backing supports can come as timber or steel. The wear pleated system comes as one horizontal and two vertical seals.

The "wear pleated dock seals" are a cost saving from a docking shelter and also minimise the space requirement outside of the dock, however they may limit the variation of vehicles using the loading bay.

Product specification may change and it is advisable to consult with HAG technical advisors before specifying or ordering. HAG operates a policy of continuous improvement.
